

1 I claim:

2 1. A stabilization system for the front suspension of  
3 a vehicle comprising:

4 an axle attachment plate configured for attachment  
5 with a front axle member of a vehicle, said  
6 axle attachment plate having first  
7 stabilization rod securing means;

8 a chassis attachment plate configured for  
9 attachment to a chassis of a vehicle near a  
10 front axle thereof;

11 a stabilization rod member having first and second  
12 stabilization rod member ends, a first and  
13 second threaded orifices being positioned  
14 respectively at said first and second  
15 stabilization rod ends;

16 first and second eye members respectively having  
17 first and second threaded studs extending  
18 from an eye structure thereof, said first and  
19 second threaded studs being configured for  
20 adjustable threaded engagement with said  
21 first and second threaded orifices of said of  
22 said first stabilization rod member, said eye  
23 structure of said first eye member being

1 configured for securement to said first  
2 stabilization rod securing means of said axle  
3 attachment plate, and said second eye being  
4 configured for securement to said second  
5 stabilization rod securing means of said  
6 chassis attachment plate;

7 first and second eye member securing members for  
8 securing said first and second eye members in  
9 a threaded engagement with said stabilization  
10 rod member.  
11

12 2. The system of Claim 1 wherein said axle attachment  
13 plate is configured for attachment to the differential  
14 portion of said axle of said vehicle, said axle  
15 attachment plate having mounting holes which, in  
16 spacing and configuration, correspond with bolts  
17 holding an access plate of said differential in place,  
18 whereby said axle attachment plate may be mounted to  
19 said axle using said bolts of said differential.  
20

21 3. The system of Claim 1 wherein said first and  
22 second eye member securing members and said first and  
23 second threaded orifices of said stabilization rod

1 member are respectively configured to constitute first  
2 and second hime joints assemblages.  
3

4 4. The system of Claim 2 wherein said first and  
5 second eye member securing members and said first and  
6 second threaded orifices of said stabilization rod  
7 member are respectively configured to constitute first  
8 and second hime joints assemblages.  
9
